École Normale Supérieure - Paris

L3 - FIP

Introduction to Quantum Mechanics

Lecture notes

September 2024

Adel Bilal

Laboratoire de Physique de l'École Normale Supérieure

ENS, Université PSL, CNRS,
Sorbonne Université, Université Paris Cité
24 rue Lhomond, 75231 Paris Cedex 05, France

Contents

1 Introduction **1**
- 1.1 The early days of quantum mechanics . . . 1
  - 1.1.1 The Franck-Hertz experiment . . . 2
  - 1.1.2 Young's double slit interference . . . 2
  - 1.1.3 The Davisson-Germer experiment . . . 4
  - 1.1.4 Quantum mechanics and modern life . . . 4
- 1.2 Bibliography . . . 4

2 The basics of quantum mechanics for 2-state or N-state systems **5**
- 2.1 Why 2 state systems ? . . . 5
- 2.2 The polarisation of photons . . . 5
- 2.3 The Hilbert space for 2-state systems (single q-bit) . . . 7
- 2.4 Dirac's notation, bras and kets . . . 8
- 2.5 Generalisation to a finite-dimensional Hilbert space . . . 9
- 2.6 Linear operators on finite-dimensional Hilbert spaces . . . 10
- 2.7 The postulates of quantum mechanics for N-state systems . . . 14
- 2.8 Some direct implications of the postulates . . . 17
- 2.9 General solution of the Schrödinger equation . . . 19
- 2.10 Density operator . . . 20

3 Spin $\frac{1}{2}$ **23**
- 3.1 The Stern-Gerlach experiment . . . 23
- 3.2 Quantum-mechanical description of the Stern-Gerlach experiment . . . 24
- 3.3 Spin $\frac{1}{2}$ . . . 26
- 3.4 The group of space rotations . . . 30
  - 3.4.1 Spin operators and rotation generators . . . 30
  - 3.4.2 Some remarks about Lie groups and Lie algebras . . . 32
  - 3.4.3 Back to the rotations . . . 34
- 3.5 Time evolution of a spin-$\frac{1}{2}$ . . . 37
- 3.6 Magnetic resonance . . . 39

4 Other 2-state systems **42**
- 4.1 Ground states of the ammonia molecule . . . 42
- 4.2 Coupling the ammonia molecule to an electric field . . . 45
- 4.3 The principle of the ammonia maser . . . 47
- 4.4 General time-independent 2-state systems . . . 49

5 Multiple 2-state systems **50**
- 5.1 Tensor product : definition, factorised and entangled states . . . 50
- 5.2 Linear operators on $\mathcal{H}_{(1)} \otimes \mathcal{H}_{(2)}$ . . . 52
- 5.3 Two spin-$\frac{1}{2}$, singlet and triplet . . . 54
- 5.4 Hyperfine structure . . . 56
- 5.5 Measuring observables of one of the two systems . . . 58
- 5.6 EPR paradox . . . 61
- 5.7 Bell's inequalities . . . 62
- 5.8 No-cloning theorem and quantum teleportation . . . 65
- 5.9 Quantum cryptography . . . 67
- 5.10 Density operators on tensor product spaces and reduced density operators . . . 69
- 5.11 ZX-calculus . . . 71

6 Quantum mechanical systems with infinite-dimensional Hilbert spaces 76
6.1 Position . . . 76
6.2 Infinite-dimensional Hilbert spaces and linear operators on $L^2(\mathbf{R})$ . . . 78
6.3 Infinite-dimensional Hilbert spaces : kets, bras, position operator . . . 82
6.4 Momentum operator and eigenstates, Fourier transform . . . 84
6.5 Observables . . . 88
6.6 The postulates of quantum mechanics for infinite-dimensional (separable) Hilbert spaces . . . 91
6.7 Some simple implications . . . 92
6.8 Classical limit and Ehrenfest's theorem . . . 93
6.9 Several spatial directions . . . 96

7 Schrödinger equation with one-dimensional potentials 97
7.1 Generalities . . . 97
7.2 Piecewise constant potentials . . . 99
7.3 Bound states of the finite potential well . . . 100
7.4 The infinite potential well . . . 102
7.5 Scattering by a potential well . . . 104
7.6 Tunnel effect . . . 105

8 The harmonic oscillator 107
8.1 The Hamiltonian and operators a and $a^\dagger$ . . . 107
8.2 Expectation values of X^n and P^n . . . 110
8.3 Coherent states . . . 113
8.4 Hermite polynomials . . . 116
8.5 Harmonic oscillator at finite temperature : canonical ensemble . . . 117
8.6 Charged harmonic oscillator in a constant electric field . . . 118
8.7 Bogolyubov transformation . . . 120

9 Perturbation theory 121
9.1 Time-independent perturbation theory . . . 121
9.2 The example of the anharmonic oscillator . . . 124
9.3 Time dependent perturbations . . . 127
9.4 Fermi's golden rule . . . 130

10 Angular momentum and rotations 132
10.1 3-dimensional problems . . . 132
10.1.1 Separated $x - y - z$ dependence . . . 132
10.1.2 Symmetry under rotations in a plane . . . 133
10.1.3 Spherical symmetry . . . 134
10.2 Space rotations and angular momentum operators . . . 135
10.2.1 The group SO(3) of space rotations and its Lie algebra so(3) . . . 135
10.2.2 Representations and projective representations in quantum mechanics . . . 136
10.2.3 Quantum mechanical angular momentum operators . . . 138
10.3 Construction of the standard basis $|j, m\rangle$ . . . 140
10.4 $\mathcal{L}_a$ as angular differential operators and spherical harmonics . . . 143

11 Three-dimensional central potentials and hydrogen atom 148
11.1 Hamiltonian for spherical potentials and radial equation . . . 148
11.2 Viriel theorem . . . 149
11.3 Three-dimensional harmonic oscillator . . . 150
11.4 Hydrogen atom and periodic table of elements . . . 151
11.4.1 Eigenvalue problem in the Coulomb potential . . . 151
11.4.2 Periodic table . . . 154
11.5 Two particle interaction . . . 156
11.5.1 Separation of relative and center of mass observables . . . 156

11.5.2 Diatomic spectra . . . 157
11.5.3 Meson spectra . . . 157

12 Charged particle in an electromagnetic field **158**
12.1 Maxwell's equations and charged particles in an electromagnetic field . . . 158
12.1.1 Maxwell's equations and the vector and scalar potentials . . . 158
12.1.2 Classical description of a charged particle in an electromagnetic field . . . 160
12.1.3 Quantum mechanical Hamiltonian in the presence of a magnetic field . . . 161
12.2 Gauge invariance as a guiding principle . . . 162
12.3 Constant magnetic field and Landau levels . . . 164
12.4 Commutation relations of the covariant derivatives and Pauli-Schrödinger Hamiltonian . . . 166
12.4.1 Commutation relations of the covariant derivatives . . . 166
12.4.2 Non-relativistic limit of the Dirac equation . . . 167
12.5 Aharonov-Bohm effect . . . 169

13 Addition of angular momenta **172**
13.1 Motivation . . . 172
13.2 General formalism and Clebsch-Gordan coefficients . . . 173
13.3 Two simple examples . . . 177
13.3.1 The case of two spin-$\frac{1}{2}$ . . . 177
13.3.2 Spin-orbit coupling . . . 178
13.4 Composition of spherical harmonics . . . 178

14 Identical particles **181**
14.1 Bosons and fermions . . . 181
14.2 Symmetrisations and anti-symmetrisation . . . 183

15 The role of symmetries in quantum mechanics **186**
15.1 Some basics on groups . . . 186
15.1.1 Definition and examples . . . 186
15.1.2 Lie groups and Lie algebras . . . 188
15.2 Some basics on representations . . . 189
15.2.1 Motivation and definition . . . 189
15.2.2 Irreducible representations . . . 190
15.2.3 Products of irreducible representations . . . 192
15.3 Some more advanced considerations . . . 193
15.3.1 Group manifold and topology . . . 193
15.3.2 First homotopy group and covering groups . . . 193
15.4 Selection rules and Wigner-Eckart theorem . . . 195
15.4.1 Selection rules from symmetries . . . 195
15.4.2 Wigner-Eckart theorem . . . 197
